Processes measurement
data for your use

**Web-based monitoring
system for measuring
devices and targets**

Alarms at the right time

Diverse data transfer methods

Scales to your business operations

Developed with users

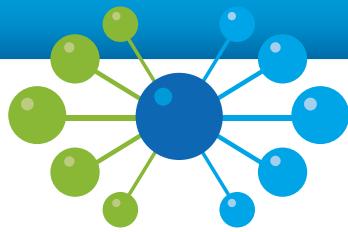

Requires nothing more than
a web browser

Easy to maintain

Measure your success

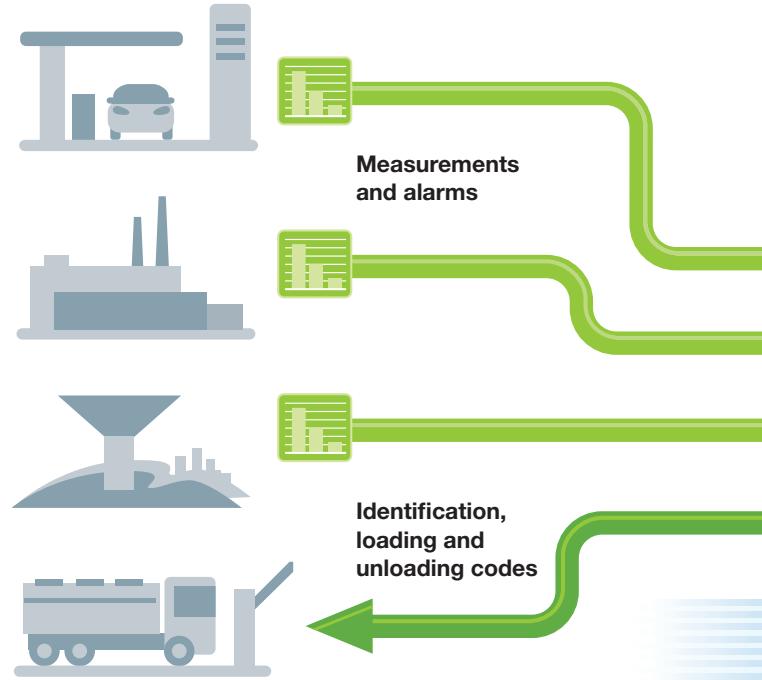

LabkoNet®

collects
measurement data
and processes it for
specific requirements

With the LabkoNet system, you can smoothly monitor a vast array of various measurement devices and targets. The system collects and transfers measurement data, and automatically signals an alert, presenting options to you on a clear and graphic website, or your mobile phone.

LabkoNet streamlines your routines and frees up time for other tasks. The measurement data is rapidly made available to all parties in the process.

LabkoNet is a SaaS (Software as a Service) solution, with no need to install software on the customer's equipment. The system's components operate from a server via a data network, and the software is used via a web browser.

The benefits of SaaS include minimal investment costs and extremely fast implementation. The customer does not need to purchase software licences or worry about updates. In addition, the data security and antivirus solutions are always up-to-date.

Sites overview

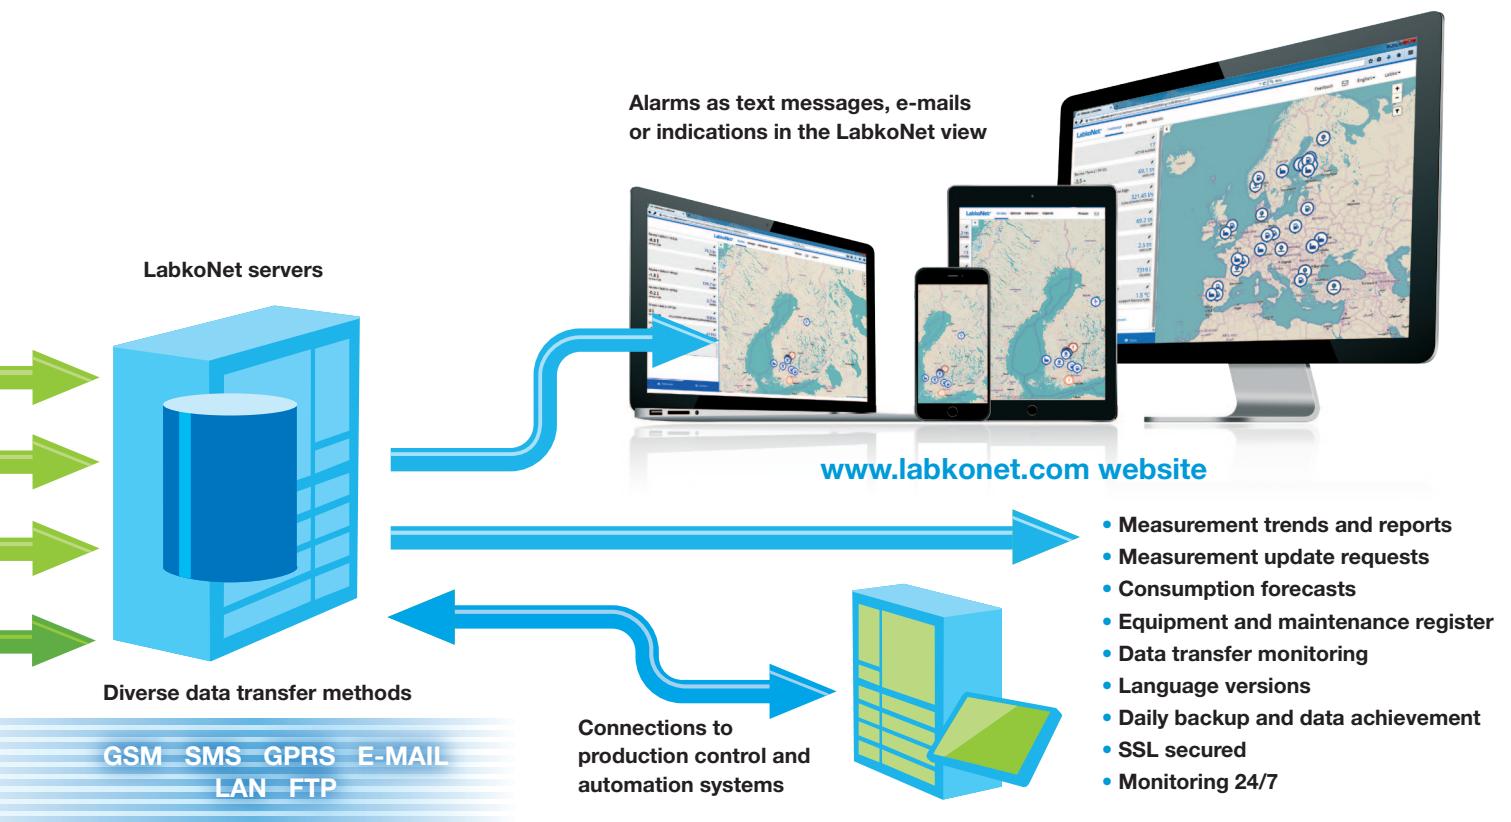

Petrol station 1

Tank 1 95E10 16550 l VOLUME
10116 liters / 24h

Tank 1 95E10 2.12 l CALCULATED CONSUMPTION

Site view

Tank	Amount	Order limit	High level alarm	Low level alarm
TE210	27.90 m3	15 m3	45.7 m3	12.2 m3
TE212	1.15 m3	0 m3	20 m3	0 m3
EFT50	0.00 m3	0 m3	20 m3	0 m3
EFT50	44 m3	544 m3	75 m3	44 m3

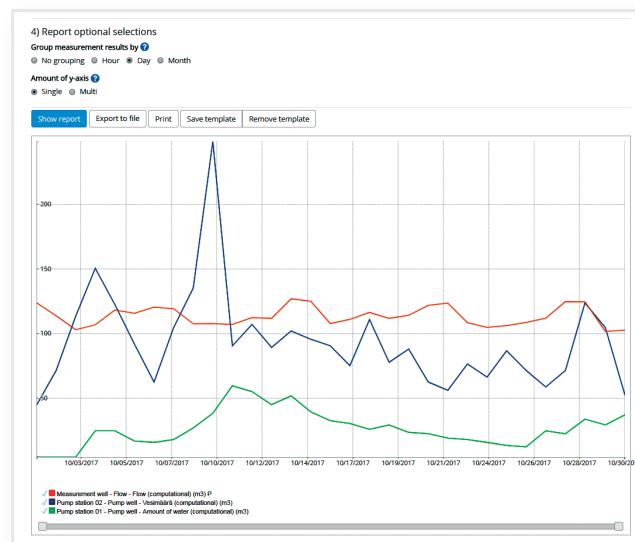

Wherever, whenever and whatever

LabkoNet is available to you at all times. All you need is a web browser and your own credentials for logging in to the system.

Scales to your business operations

LabkoNet is ideal for the monitoring of any number of targets, from one to several hundred, and it can be easily expanded. The system helps users to simplify and streamline their routines, freeing up time for other tasks. The data for material flow or work control is collected automatically, and made rapidly available to all parties involved.

Trend view

Easy to maintain

Changes and system expansions are effortless. No maintenance programs or tools are required to manage LabkoNet. All you need is a web browser. LabkoNet will not place an additional burden on your organisation as its upkeep, maintenance and backup are covered by the system's service fee.

Alarms at the right time

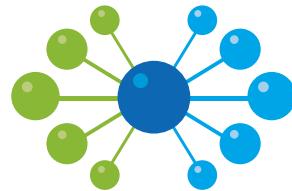

Reliable alarm transfer is one of LabkoNet's most important features. The system supports calendar rules for alarms, and you can set alarm transfers for different people at different times of the day. If you want, you can also delay the transfer of non-critical alarms so that you can sleep in peace.

LabkoNet® applications

LabkoNet® Level

The LabkoNet Level service automates the management of material inventories and logistics. Thanks to more efficient monitoring, you can optimise the tank filling order, and organise transportation to best suit your operations.

LabkoNet® Fuel

LabkoNet Fuel service enables online monitoring of tank inventory data. The data can be shown in trend curves from different intervals.
